

## PROGAL LVA-60

**PROGAL LVA-60** is a high concentration developed to obtain a level dyeing for disperse especially for natural shades like `Stone` and `Khaki` etc. shades. **PROGAL LVA-60** also improves the solubility of the dyestuff and therefore enables a homogenous dyeing on any concentration.

### CHARACTERISTICS

- Composition : Synergic combination of selected long chain polymers.
- Appearance : Brown liquid
- Ionic Char. : Nonionic & anionic combination
- Solubility : It can be diluted even with cold water in any ratio

### USING CONDITIONS and APPLICATIONS:

**PROGAL LVA-60** enables a level dyeing with synthetics fibers and difficult shades, which are dyed with reactive dye-stuff. One of the compromising advantages of **PROGAL LVA-60** is the fact it significantly enhances the brilliancy of the fabric. **PROGAL LVA-60** improves the rubbing fastnesses since the percentage of the unfixed dyestuff is being reduced significantly.

### Recommended Dilution Process

Recommended usage may differ according to composition of fabric, but usually the usage amount from **PROGAL LVA-60** given below will be sufficient to reach requested result.

	Dyeing	Leveling & egalizing
Usage:	0,40 – 0,80	1,00 – 2,00 gr / lt
pH:	4,30 ± 0,30	4,30 ± 0,30
Temperature	120-130 °C	120-130 °C

### STORAGE CONDITIONS:

Keep out of direct sunlight or freezing. It is stable for at least 6 months if stored in original packing and recommended storage conditions.
