

## **PRAUX SLP**

**PRAUX SLP** is an anti-slipping agent especially for regenerated and synthetic mixtures. The biggest advantages of **PRAUX SLP** are no effect of the handle and compatible with optical brightener.

### **CHARACTERISTICS**

Composition : Polyurethane emulsion  
Appearance : Off white viscous liquid  
PH :  $5,5 \pm 0,5$   
Ionic Char. : Anionic  
Solubility : Dissolves in water at every temperature and ratio.

### **APPLICATIONS:**

**PRAUX SLP** is used for negative slipping effect of finishing agents to light fabrics of regenerated and synthetic based. Recommended laboratory application before production application because of using high quantities caused hardness.

Recommended usage may differ according to requested handle, composition of fabric, but usually the concentrations given below will be sufficient to reach requested result.

**PRAUX SLP**            5 – 20 gr/lit            pH: 5,0 – 5,5

Application must be applied at room temperature

There is no special curing condition. Standard drying condition is enough for cross-linking

### **STORAGE CONDITIONS:**

Keep out of direct sunlight or freezing. It is stable for at least 6 months if stored in original packing and recommended storage conditions.
